

2022 Members Grow Plants at Home

With the old greenhouse gone, and the new greenhouse under construction, several club members used their homes to propagate and care for cacti and agaves.

Sandy Warmuth rooted several Totem Pole Cacti and other plants at her home.

Several Aloes were propagated by Sandy Warmuth.

Sandy Warmuth had multiple plants growing at her house while waiting for the new greenhouse to be finished.

Lynn Krabbe and Bruce Kilbride’s home provided growing space for an African Milk Tree.

The African Milk Tree is a “mother” plant taken care of by Lynn Krabbe and Bruce Kilbride. “Mother” plants produce new plnats by either cuttings or by producing “pups” or baby plants.

Lynn Krabbe and Bruce Kilbride. tended for two different African Milk Trees.

Lynn Krabbe and Bruce Kilbride also took in this Queen of the Night plant.

The Queen of the Night Plant was donated shortly before the old greenhouse was torn down. Lynn Krabbe and Bruce Kilbride cared for it as a future “mother” plant in the new green-

The raised beds at Denise Wirz’s house provides a great place to grow some blue agave.

This plant is thriving under a club member’s care while the new greenhouse is built.

These succulents will return to the greenhouse when it opens.

Several “Mother” plants on the patio.
